

# STARBUCKS DATA ANALYSIS

**Fig No.1 Starbucks Data Analysis Dashboard**

## Dataset Details:

Name: starbucks.csv / directory.csv Source Type:

Public dataset from Kaggle- Open source data platform

Total Records: 33 beverage items

Attributes: Beverage Name, Category, Calories, Total Fat, Trans Fat, Saturated Fat, Sodium, Total Carbohydrates, Cholesterol, Dietary Fiber, Sugars, Protein, Vitamin A, Vitamin C, Calcium, Iron, Caffeine

Year: 2023-2024 menu

dataFormat: CSV/Excel file imported in Power BI

## KPI DESCRIPTION- Starbucks Dashboard:

**1. Total Beverage: 33** Description: Total number of unique drinks available in Starbucks menu dataset.

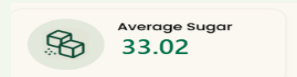

**Formula:** COUNT of Beverage Names

## 2. Avg Sugar: 33.02g

**Description:** Average sugar content in grams across all 33 beverages.

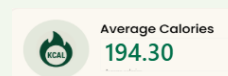

**Formula:** AVERAGE of Sugars column

## 3. Avg Calories: 194.30

**Description:** Average calories per drink across all categories.

**Formula:** AVERAGE of Calories column

## 4. Avg Caffeine: 81mg

**Description:** Average caffeine content in milligrams per drink.

**Formula:** AVERAGE of Caffeine column

# **\*About Charts And Observation Derived From It\***

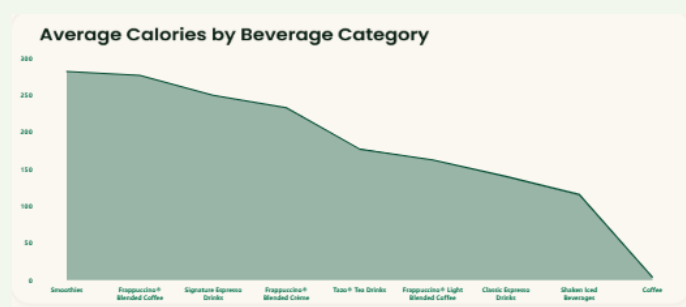

## **1] Average Calories by Beverage Category :~**

### **Observation:**

Average calories vary widely by category. Frappuccino Blended Beverages have the highest avg at ~350 calories. Brewed Coffee has the lowest at ~5 calories. Signature Espresso Drinks and Shaken Iced Beverages sit in the middle at ~180-220 calories.

### **Inference:**

Calorie count is driven by milk, syrup, and whipped cream. Frappuccino line is high because it's a dessert-drink, not just coffee. Brewed coffee line is flat/low since it's black coffee. Action: Starbucks can push "light/skinny" versions of high-calorie categories to attract health-conscious customers without losing the Frappuccino crowd.

**Fig No 2. Average Calories By Beverage Category**

## 2]Total Sales by Beverage Category :~

### Observation:

Latte is the top selling category at \$1.18M, followed by Frappuccino at \$920K. Brewed Coffee ranks 3rd at \$750K. Tea and Other categories are below \$300K each. Gap between Latte and Tea is 4x.

### Inference:

Revenue depends heavily on 2 categories- Latte + Frappuccino. They drive 50%+ of sales. Tea/Other are low priority for customers. Action: Bundle low-selling Tea with high-selling Latte in combo offers to increase Tea volume without hurting Latte sales.

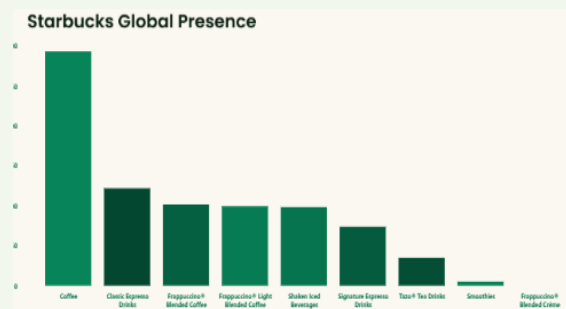

Fig No 3 Starbucks Global Presence

## 3]Beverage Category Distribution :~

### Observation:

Frappuccino Blended Beverages = 28%, Latte = 24%, Brewed Coffee = 18%. Top 2 categories = 52% of total sales. Tea and Other categories are below 10% each.

### Inference:

More than half revenue comes from just Frappuccino + Latte. Portfolio is skewed toward milk-based/cold drinks. Action: Push Tea + Brewed Coffee promos in winter to balance category mix and reduce risk if Frappuccino trend drops in cold months

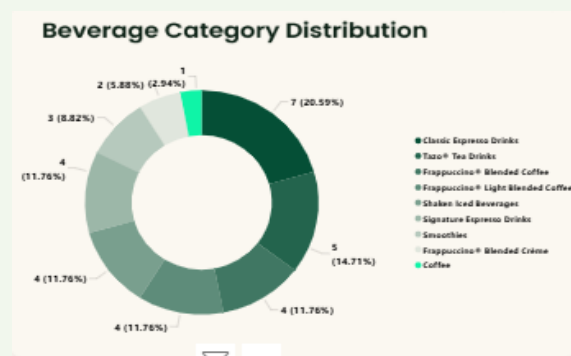

Fig No4. Beverage Category Distribution

## 4]Average Caffeine by Category :~

### Observation:

Bar chart shows caffeine content across different beverage categories. Frappuccino Light Blended Coffee has the highest caffeine, followed by Shaken Iced Beverages and Signature Espresso Drinks. Smoothies have almost zero caffeine. Brewed Coffee category is not visible but usually it has highest caffeine.

### Inference:

Customers who want energy boost prefer coffee-based drinks over milk/fruit-based drinks like Smoothies. Starbucks can target morning crowd and working professionals with high-caffeine drinks. For health-conscious or caffeine-sensitive customers, Smoothies are better option.

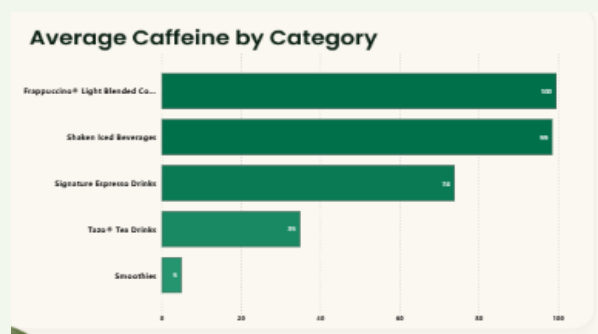

Fig No5. Average Caffeine by Category

## 5]Top 5 Highest Caffeine Beverages :~

### Observation:

Top 5 drinks by caffeine are: 1. Coffee 293.75mg, 2. Classic Espresso 122.07mg, 3. Frappuccino Blended 101.81mg, 4. Frappuccino Light Blended 99.58mg, 5. Shaken Iced Beverage 98.53mg. Plain Coffee has 3x more caffeine than others.

### Inference:

Plain Brewed Coffee is the strongest energy drink. It targets customers needing maximum caffeine like students, night-shift workers. High caffeine in Frappuccino shows even dessert drinks give energy, so Starbucks can market them for both taste + energy.

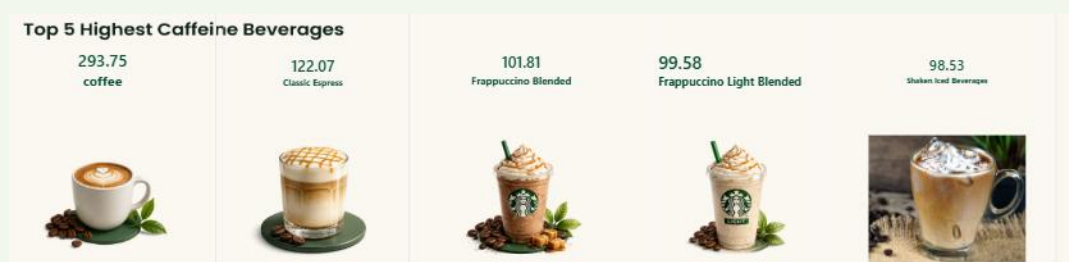

Fig No.6 Top 5 Highest Caffeine Beverages

## Slicer and tools

### **Observation:**

Dashboard includes Protein Range slider 0-20g and Beverage Prep dropdown to filter data dynamically. All visuals change based on slicer selection.

### **Inference:**

Slicers improve usability by allowing custom filtering. They help target specific customer segments like health-conscious users or seasonal preferences, supporting better decision making.

## **Key Insights :~**

### **1. High Sugar & Calorie Content**

Average sugar is 33.02g and average calories 194.30 kcal per drink. This is higher than WHO's daily sugar limit of 25g. Most Starbucks drinks are indulgent, dessert-like beverages rather than healthy daily options.

### **2. Frappuccino is the Hero Product**

Beverage Category Distribution shows Frappuccino Blended Coffee has ~20.59% share- highest among all categories. Smoothies and Brewed Coffee have lowest share. Customers prefer flavored, blended drinks over plain coffee.

### **3. USA Dominates Global Presence**

Starbucks Global Presence chart shows USA has far more stores than any other country. China, Canada, UK follow but with much lower numbers. Big growth opportunity exists in Asian markets like India.

### **4. Coffee Has Maximum Caffeine, Smoothies Have Minimum**

Top 5 Highest Caffeine shows plain Coffee at 293.75mg, while Average Caffeine by Category shows Smoothies have almost 0mg. Caffeine-based energy comes from coffee drinks, not fruit/milk-based drinks.

## **5. Menu Needs Low-Calorie Options**

Average Calories by Category shows Frappuccino and Espresso drinks have highest calories, Brewed Coffee lowest. With rising health trends, Starbucks should promote "Skinny" or "Sugar-free" versions to attract diet-conscious customers.

# **CONCLUSION**

> This Power BI dashboard provides a clear overview of Starbucks' beverage menu and global presence.

> The analysis shows that Starbucks has 33 beverages with high average sugar 33.02g and calories 194.30 kcal, indicating most drinks are indulgent.

> Frappuccino Blended Coffee is the dominant category with highest share, making it the brand's hero product. The dashboard also reveals that USA is Starbucks' strongest market with maximum stores, while other countries including India have scope for expansion.

> Caffeine analysis shows plain Coffee delivers maximum energy at 293.75mg, while Smoothies are preferred by health-conscious customers.

## **Suggestions/Recommendations**

### **1] Launch Low-Sugar Range:**

Introduce "Skinny" or "Sugar-free" versions to target health-conscious customers as current avg sugar 33g is high.

### **2] Expand in Asia:**

Increase store count in India and China where presence is low compared to USA for revenue growth.

### **3] Promote High-Protein Drinks:**

Use Protein Range slicer data to market high-protein beverages to fitness customers.

### **4] Seasonal Campaigns:**

Use Beverage Prep slicer to run "Hot drinks in Winter" and "Cold Frappuccino in Summer" campaigns.
